

How to fix the “System File is Broken” Error Message

Situation 1:

The WowBible Screen shows **“system file is broken, please connect to the computer for upgrade”**

Connect the WowBible to a PC with USB cable,  icon will be shown at bottom right corner of the desktop. Open “My Computer” and three removable disks will be shown.

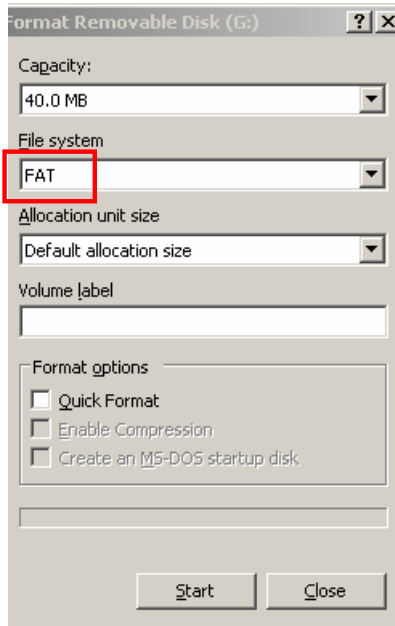

Situation 2:

The WowBible Screen shows **“Sorry, file system error, please press [V] to format USB Disk, or restart it”**

- a. Turn off the device (If the WowBible can not be shut off normally, click “RESET” on the back of the unit using the stylus.)
- b. Press the enter “”button and hold it, **keep holding until Step C is finished.**
- c. Connect device to PC with USB cable, Click “RESET”, and indication “Turning on ” will be shown on the screen.
- d. The  icon will be shown at the bottom right corner of the desktop, Enter “My Computer ”and there are three removable disc will be shown .

Once three removable disks are shown on PC, both Situation 1 and Situation 2 should follow the same operation as outlined below:

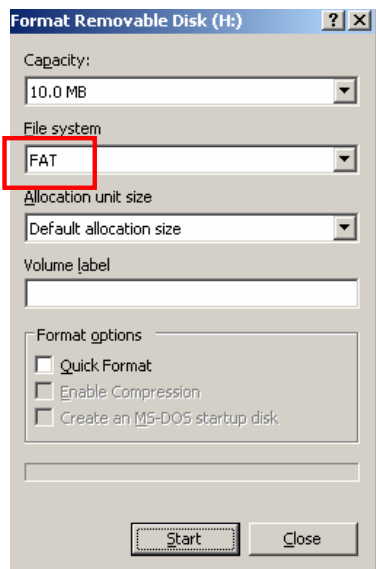

(1)Click on the Removable disk with “40.0MB” of free space. This will typically be the first of the 3 removable drives listed alphabetically. Right click on the drive with 40.0 MB of free space, and select “Format” from the menu that appears as shown in the picture below:

Note: You Must select system file as “FAT” format, then click “Start” to begin formatting.

Click “Close” from the popup that appears.

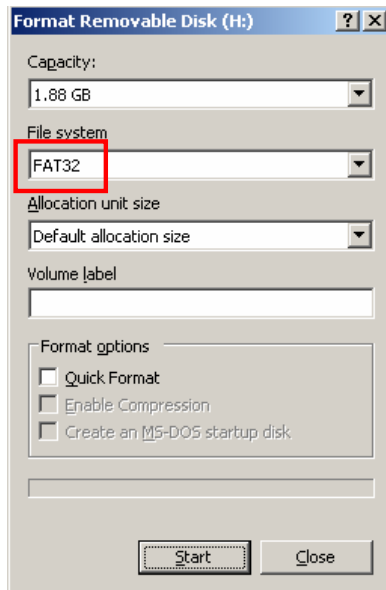

(2) Click Removable disk with “10.0M”, right click mouse, select “Format” as picture below:

Note: You Must select system file as “FAT” format, then click “Start” to begin formatting.

Click “Close” from the popup that appears.

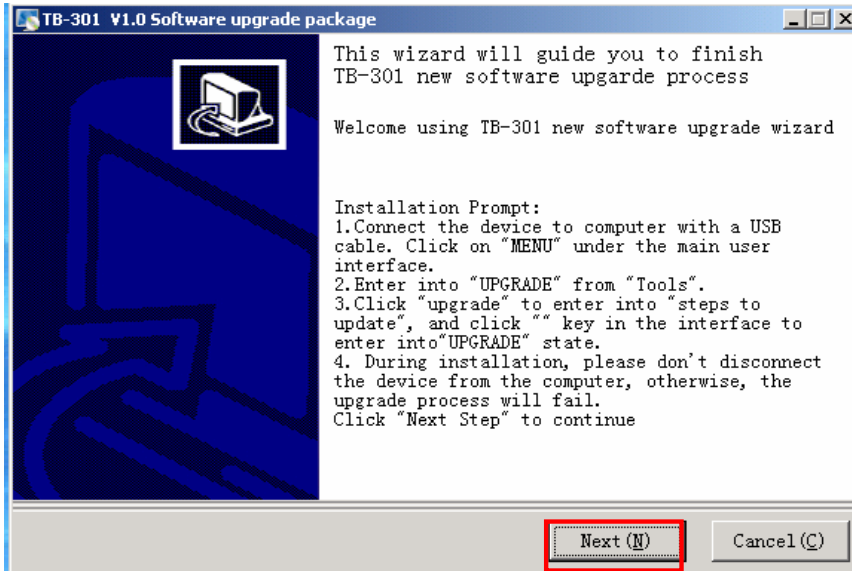

(3) Click Removable disk with “1.88G”, right click mouse, select “Format” as picture below:

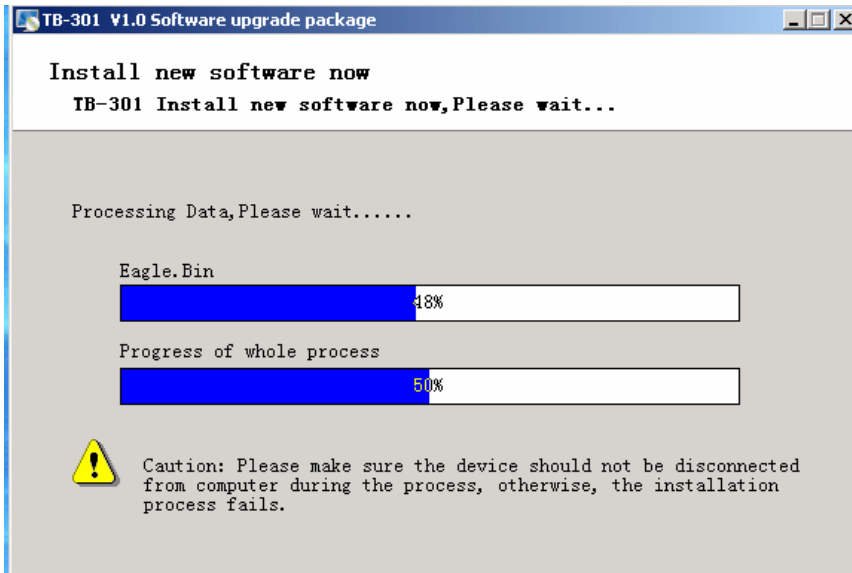

Note: Must select system file as “FAT32” format, click “Start” to start formatting.

Click “OK” from the popup that appears.

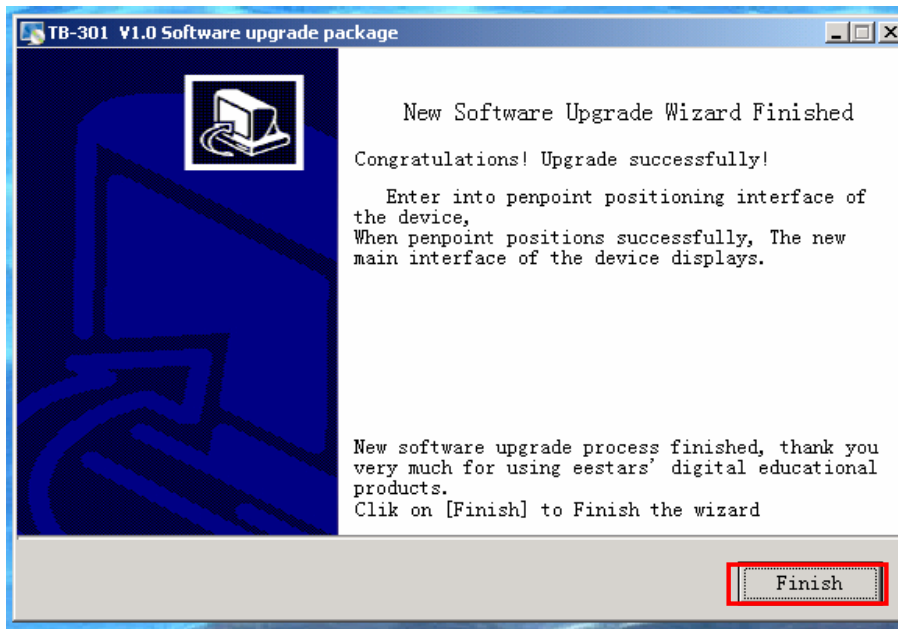

- A. When the above steps are finished, exit USB Mode through “Safely Remove Hardware”  .
- B. Press the “RESET” button.
- C. Connect the device to your PC with USB cable, and it will enter USB Mode Automatically.
- D. Double click the file “**TB-301V1.0 Software Upgrade Package.exe**”, which will display the following window as shown in the picture below:

Click "Next" to upgrade:

Wait for the installation to finish at which time the following window will appear (It will take about 45-60 minutes depending on your computer speed) :

5. Click **“Finish”** to finalize the upgrade process.
6. Unplug the unit and press Reset.
7. Turn the unit on and calibrate the device to finalize installation.

Congratulations, the “System File is Broken” error is now fixed. All original WowBible features and settings will be restored.
